

Unki Mine IRMA Assessment Invitation for Stakeholder Feedback

SCS Global Services (SCS) announces the commencement of a third-party independent surveillance assessment of Anglo American's Unki Platinum Mine in pursuance of the Initiative for Responsible Mining Assurance (IRMA) Standard for Responsible Mining.

The **Unki Mine is located in Shurugwi near Gweru, Midlands Province, Zimbabwe**. SCS will carry out the on-site portion of the surveillance assessment between **August 1-5, 2022**.

Stakeholders (community members, workers, and other affected or interested parties) are invited to submit written comment to SCS on the environmental and social performance of Unki Mine. In particular, comments should focus on the performance of the mine compared with the IRMA Standard. Stakeholders may also contact SCS if they would like to be interviewed as part of the assessment process. Interviews with local stakeholders will be scheduled to coincide with the on-site assessment and may be virtual (telephone or videoconference) or in person, taking into consideration Covid-19 precautions.

Please register as a stakeholder to be notified as more information about the assessment becomes available. To register, submit questions or comments, or request to be interviewed as part of the assessment process log onto <https://info.scsglobalservices.com/irmafeedback>. Comments are kept confidential upon request.

SCS is an IRMA-approved certification body with head offices in Emeryville, California. For more information about SCS, please visit www.scsglobalservices.com.

For more information on the IRMA Standard requirements and certification, visit www.responsiblemining.net. For concerns relating to the mine site assessment process, navigate to IRMA's Issues Resolution System.

If you are new to IRMA, welcome!

The **Initiative for Responsible Mining Assurance (IRMA)** is a voluntary certification system aiming to improve mining operations' performance. Mine sites that choose to invest in an IRMA assessment have their environmental and social performance measured by independent audit teams.

An IRMA assessment digs deep with over 400 requirements covering things like human rights, air and water quality, occupational health and safety, financial security, and community contribution and investment. Stakeholder input is a big part of IRMA assessments because feedback of those living close to an operation help auditors understand better how each mine site responds to area needs and concerns relating to IRMA Standard criteria.

The **Unki Mine located in Shurugwi near Gweru, Midlands Province, Zimbabwe** will undergo an onsite IRMA assessment **August 1 – 5, 2022**. To provide voluntary feedback please follow the steps below; personal identifying information and feedback are confidential upon request.

STEP 1

STEP 2

Share your feedback

STEP 3

Sign up for an interview
(optional, upon request)

SCS Global Services is one of two independent audit teams qualified to measure performance against the IRMA Standard. Our small working group is composed of highly trained professionals with extensive experience in mining best practices. We are auditors, agronomists, anthropologists, biologists, chemists, geologists, hydrologists, health, safety and environmental experts, social specialists, and engineers that share the same vision: to leave all things better than we found them. To learn more about our programs and services, go to scsglobalservices.com.
