

**On-site, independent audit under the IRMA Standard for Responsible Mining
Livent Fenix Lithium Mine, Salar del Hombre Muerto, Catamarca, Argentina**

Between November 28 and December 2, 2022, SCS Global Services (SCS) will commence an independent audit of Livent's Fenix lithium operation to evaluate its performance under the Initiative for Responsible Mining Assurance (IRMA) Standard for Responsible Mining. IRMA is a voluntary assessment system that provides a set of best practice standards and participatory stakeholder engagement requirements created to improve mining operations' environmental and social performance. Livent (NYSE: LTHM) is an IRMA member.

The third-party, independent audit provides stakeholders, including community members, workers, organized labor, government representatives, and other interested parties, the opportunity to give feedback on the mine's environmental, health, safety, and community performance. SCS will use stakeholder comments to help determine how the Livent Fenix operation performs relative to the IRMA Standard.

Stakeholders are invited to submit written comments to coincide with the on-site audit. Stakeholders may also contact SCS if they would like to be interviewed. Interviews will take place virtually (telephone or videoconference) or in person, considering Covid-19 precautions. Stakeholder comments, questions, and interview requests can be made through the link below; commenters' identities and remarks are kept confidential upon request.

Upon completion of the Livent Fenix audit, IRMA will publish the independent audit results and present an overall achievement score: IRMA Transparency, IRMA 50, IRMA 75, or IRMA 100. Only mines achieving IRMA 100 are "certified" under the IRMA Standard.

SCS is an IRMA-approved certification body with head offices in Emeryville, California. For more information about SCS, please visit www.scsglobalservices.com.

The IRMA Standard is the world's most comprehensive mining standard for industrial-scale mines and the only one equally governed by all stakeholders: mining companies, mineral purchasers, investors, organized labor, communities, and civil society NGOs. Mine site verification under the IRMA Standard is voluntary. For more information on the IRMA Standard requirements and certification, visit www.responsiblemining.net.
