

2BSvs

Certification for sustainable biofuels, biogas, and biomethane

Demonstrate proof of compliance with the European Renewable Energy Directive (RED III) for your sustainable supply chain of biofuels, biomass and biomethane with 2BSvs audits and certification from SCS Global Services.

The 2BSvs scheme enables regulatory compliant sustainability claims that cover agricultural biomass, wastes and residues, materials and renewable energies and covers the entire process from the collection of biomass and other inputs and right up to the processing and production of biofuels, bioliquids and biomass fuels.

The expansion of 2BS certification coincides with the European Commission's January 2025 recognition of the 2BS certification's co-processing procedures, enabling companies to combine renewable materials with traditional fossil-based materials in a process that complies with the RED III directives.

2BS has two distinct sustainability certification schemes, one for Biofuels, Bioliquids and Biogas (2BSvs), and one for Food and Feed (2BSXtra).

What you get from working with SCS Global Services

- Local expert auditors and technical staff
- High quality customer service
- Competitive pricing
- Bundled services allowing for one streamlined audit cycle per year
- Efficient processes and systems
- Simplified transfer and renewal processes and scheduling
